Subject: Recommendation letter for Joel Morel

It is a great pleasure to write a letter of recommendation for Joel Morel. I have known Joel since the Spring of 2019, when he showed interest in Aerospace Engineering and got involved with the Aerospace Engineering lab. Joel has hands-on approach and showed keen interest in the subject matter from the very beginning. He also got directly involved in the Aerial Robotics Competition Team (ARCT) and became the key contributor for the design, fabrication and flying of the remotely piloted fixed wing aircraft. Joel played a leadership role in the ARCT student design team that ultimately resulted in the team scoring high and ranking amongst one of the top teams in the advanced 2019 SAE Aero student design competition. His specific expertise includes design and fabrication of aerospace vehicles using 3D printing and other advanced manufacturing techniques. He demonstrated that he could not only handle challenging environments efficiently but also excel in any critical problem presented to him. He showed interest in learning and performing well.

I was impressed by his willingness to work above and beyond what is required from him. I find him ready to take on challenges. Given his strong work ethic and zeal, I am confident that he will be an asset to any organization he joins.

I believe his passion and quest for learning will prove beneficial in achieving his career goals. Please feel free to contact me if you need further information.

Thanks

Adeel Khalid
